Hosting, Finding and Swap Parking

Business Rules - Hosting, finding and swapping parking

Change-log (for internal reference)

Old Section / Heading	Action
2.2 Submit Request & Pending State	Rename to **2.2 Matching** and clarify nearest-giver logic.
2.3 Swipe-based Option Selection	**Delete** – replace with new **2.3 Single-Card Decision** flow.
2.4 Match Confirmation	Replace by **2.4 Spot-Details & Auto-Confirm** (timer continues).
2.5 Arrival, Waiting & Swap	Keep, but reference new confirmation trigger.

1. ***Hosting a Parking Spot (Giver)***

1.1 **Spot Setup**:

- **Parking Type Selection**:
- Giver chooses between:
- **Outdoor Spot**: Includes paid or public outdoor parking spaces.
- **Indoor Spot**: Parking inside structures such as garages or malls.
- **GPS Pinning**:
- For **outdoor spots**, GPS auto-pins the parking spot location.
- If GPS signal is weak, the app notifies the giver to pin the location manually.
- **Indoor Parking Information**:
- For indoor spots, the giver must enter details such as floor, section, or nearby landmarks.
- **Parking Reminder**:
- The app saves all parking information for the giver's future reference.

1.2 **Hosting Modes**:

- **Ready to Leave Mode**:

- Hosting remains active for **10 minutes** (10 minutes (giver receive notification) plus 1 minute) to allow the giver to walk back to their spot.
- **Leaving Now Mode**:
- Hosting remains active for **5 minutes** (5 minutes (giver receive notification) plus 1 minute), assuming the giver is already at the spot and ready to leave.

1.3 **Dynamic Hosting Updates**:

- Giver can extend hosting time anytime, notifying seekers if a match is confirmed.
- Seekers can choose to wait for the extended time or rematch to another spot.

1.4 **Cancellation by Giver**:

- **Within Active Period**:
- Giver earns **0 credits or a configurable amount** (e.g., half credit amount), determined by the system admin backend.
- System rematches the seeker or prompts them to cancel if they are no longer within the buffer zone.

- Frequent cancellations result in deprioritization in future matches.

1.5 **Notifications and Reminders**:

- Both parties are notified when the hosting active period is about to expire.

2. ***Finding a Parking Spot (Seeker)***

2.1 Destination & Preference Setup 🆕

The seeker selects or searches a destination, then on the same screen can:

- toggle “Proper-parking only”
- choose Indoor / Outdoor / Both
- pick or add a Vehicle Profile

Event ordering. The earlier cancellation (giver vs seeker) is determined by **server timestamps**; the earlier canceller is treated as “cancels first.”
Configurability. All amounts and recipient splits above are **configurable in Admin**.he UI shows ‘Total Credits Required’ **(Premium: 2 credits + 1 refundable deposit credit; Basic: 4 credits + 1 refundable deposit credit)** — all values configurable in Admin.

2.2 Matching (renamed)

Back-end finds the **nearest giver** that satisfies: • ETA + 1-minute buffer fits inside the host's remaining active time (configurable)

- within 1 km **or** 9-minute ETA of the destination (whichever comes first)
- vehicle-type compatibility and proper / tight flag rules.
- ETA will be determined by calling Google Map API and convert to Grab Map API during CR.

2.3 Single-Card Decision (new — replaces swipe flow) 🆕

The app displays **one parking card** with a visible **X-second countdown** (default 20 s, configurable).
Buttons on the card:

- **Choose This** – locks the spot and opens Spot-Details.
- **Search Again** – returns to destination entry and restarts matching.

Server logs every Search Again event.

2.4 Spot-Details & Auto-Confirm (new)

The Spot-Details page shows full information and the same countdown timer.

- If the seeker taps **Choose This** before the timer ends → confirmation occurs immediately.
- If the timer reaches 0 with no action → the spot auto-confirms.
- **Discard** (if available) aborts the match, refunds all credits, and returns to destination entry.

2.5 Confirmation & Navigation (unchanged logic, new trigger)

Upon confirmation, show a banner "Spot confirmed! Open in map?" with a button
Open in Map that launches the default navigation app (Waze / Google Maps) with the spot's coordinates.

2.6 **Search and Matching**:

- Seekers initiate a search near their desired destination.
- Matching rules:
- (Auto-match) Seekers are matched only if their **ETA + 1 minutes buffer** is less than the remaining hosting active time.

- Auto-match occurs within a **1 km radius** or **9 minutes ETA** of the chosen location.
- Seekers pay the **credit amount** for the parking spot plus a **refundable deposit credit** when a match is confirmed.
- ETA will be determined by calling Google Map API and convert to Grab Map API during CR.

2.7 Cancellation by Seeker

Scope. Seekers can cancel anytime.

Before matching. If the seeker cancels **before matching** (i.e., before tapping **Choose This** in 2.4 or before the timer auto-confirms), there is **no penalty** and **full credits refund**, including the deposit credit.

Upon/after matching. If the seeker cancels **upon or after matching** (i.e., confirmation already occurred in 2.4):

- **Deposit:** The **deposit credit is forfeited in full**. *(TBD by Product Owner (Stanley): deposit forfeiture allocation; Admin-configurable.)*
- **Premium account: 1 credit** is paid to the matched giver (**unless the giver cancelled first**).
- **Basic account: 2 credits total** are charged — **1 credit to Platform** and **1 credit to the matched giver** (**unless the giver cancelled first**).

Event ordering. The earlier cancellation (giver vs seeker) is determined by **server timestamps**; the earlier canceller is treated as "cancels first."

Configurability. All amounts and recipient splits above are **configurable in Admin**.

3. ***Swap Confirmation***

3.1 **Actions During Active Period**:

Within Active Hosting Period:

- **Giver Action**:
- Giver clicks "OK" to confirm a successful swap and earns the **full credit amount (2 credits)**.
- If the Giver cancels anytime within the active hosting period, Giver earns **0 credits or a configurable amount** (e.g., half credit amount), determined by the system admin backend.
- Thereafter, t~~T~~he system notifies the seeker and initiates a rematch.
- If the hosting expires without any action from the giver, no credits are earned by the giver.
- **Seeker Action**:
- If the giver confirms there is a successful swap, the seeker will receive notification (which the seeker must respond within 5 minutes upon receipt of notification). S~~s~~eeker must click "OK"

to complete the handshake and retrieve their deposit credit (full amount (2 credits) will be paid to Giver and 1 credit (deposit) to be refunded to seeker).

- If the swap does not occur, the seeker can click "Dispute" for resolution.
- If the seeker does not respond within 5 mins upon receipt of notification, full amount (2 credits) will be paid to Giver and seeker's deposit (1 credit) will be forfeited)
- When the hosting active period ends:
- **Giver Options**:
- Notification will be sent to giver upon the expiry of active hosting period (5 mins or 10mins, whichever is applicable) which the giver must respond (either "successful swap" or "seeker no show" within 1 min from the expiry of active hosting period (5mins + 1min or 10mins + 1 min, whichever if applicable). If the giver does not respond within the said 1 min, giver will not earn any credit and full amount plus deposit will be refunded to seeker).
- **Click OK**: Giver earns **full credit amount (2 credit)**.
- **Click Seeker No-Show**: Giver earns **half credit amount (1 credit)**. Half credit amount (1credit) plus deposit (1 credit) will be refunded to seeker.
- **Seeker Actions**:
- If the seeker disputes the swap:
- **Giver Clicks OK**:
- Giver earns **full credit amount**.
- Seeker receives a **refund of their deposit credit**.
- **Giver Clicks Seeker No-Show~~Cancel~~**: Giver earns **half credit amount (1 credit)**. Half credit amount (1credit) plus deposit (1 credit) will be refunded to seeker.
- ~~Giver earns **full credit amount**.~~
- ~~Seeker receives a **refund of their deposit credit**.~~
- The **seeker's paid credit for the match** is held pending dispute resolution.

3.2 **Unconfirmed Swaps**:

- If neither party confirms or cancels:
- Giver earns **no credits**.
- Seeker is refunded their **full credit amount** and deposit credit.

4. ***Dispute Resolution***

4.1 **Dispute Submission**:

- Both parties submit their disputes with a preset list of common reasons (e.g., "Seeker did not arrive," "Spot was occupied"). Any dispute must be submitted within 24 hours upon the active hosting period ends.

4.2 **Verification**:

- The app uses **geolocation logs** to verify the seeker's arrival and the giver's presence during hosting.
- Seeker's paid credit and deposit credit are **held** until the dispute is resolved.

4.3 **Resolution**:

- All disputes are investigated and resolved **within 48 hours from the receipt of the dispute submission** by the system or support team.
- credits are refunded or credited based on investigation results.

5. ***Community Guidelines and Incentives***

5.1 **Giver-Friendly System**:

- Matching rules prioritize minimizing giver waiting times by incorporating seeker ETA + buffer into match decisions.
- Givers can cancel hosting freely, with the earned credit amount configurable via backend settings.
- ETA will be determined by calling Google Map API and convert to Grab Map API during CR.

5.2 **Seeker Flexibility**:

- Seekers can review alternative spots and use **Estimated Time-to-Match (ETM)** to make informed decisions.
- Deposits and/or credits spent are fully refundable for disputes resolved in the seeker's favor.

5.3 **Penalty-Free Approach**:

- Host cancellations remain **penalty-free** (earned amount configurable per 1.4). **Seekers are penalty-free only before matching (see 2.7).** For **upon/after matching** cancellations, **seeker penalties apply per account tier** as defined in **2.7**.

6. ***System Features***

6.1 **In-App Notifications and Messaging**:

- Notifications include ETM estimates, active period expiration alerts, and status updates.

- Communication is limited to preset messages for simplicity and safety.

6.2 **Buffer Zone Matching**:

- Matches are based on seeker **ETA + 1-minute buffer** and proximity to the chosen location.
- ETA will be determined by calling Google Map API and convert to Grab Map API during CR.

6.3 **Historical Logs**:

- Both givers and seekers can view transaction logs for transparency.
